DARRIN FRESH WATER INSTITUTE
AQUATIC PLANT IDENTIFICATION PROGRAM**

Prepared by

Lawrence W. Eichler
Research Scientist

Fresh Water Institute Report #97-1

Darrin Fresh Water Institute
Rensselaer Polytechnic Institute
Troy, New York 12180-3590

February 1997

For the tenth year, the Darrin Fresh Water Institute (DFWI) has continued the Aquatic Plant Identification Program. This program was initiated as a public service for the Lake George basin, in which individuals could bring specimens to DFWI for identification. In return, it assisted DFWI in locating new Eurasian Watermilfoil and Curly-leaf Pondweed sites throughout the Lake George basin. DFWI now provides the opportunity for anyone in New York State to have plant specimens verified, which also enables us to maintain a list of locations of invasive aquatic plants such as Waterchestnut (*Trapa natans*), Curly-leaf Pondweed (*Potamogeton crispus*), Eurasian Watermilfoil (*Myriophyllum spicatum*) and Fanwort (*Cabomba caroliniana*) in New York State.

During 1996, three specimens were received and identified (Table 1). Of these, one was verified as Eurasian watermilfoil, from Upper Saranac Lake in Franklin County. No specimens of Curly-leaf Pondweed, Waterchestnut or Fanwort were received.

At the conclusion of 1996, 113 lakes in 41 counties had confirmed populations of Eurasian watermilfoil, 33 lakes in 21 counties had confirmed populations of Curly-leaf Pondweed and 3 lakes in 2 counties had Fanwort. Waterchestnut was found mainly in the Hudson and Mohawk Rivers systems, however six lakes and 15 counties were reported.

The extension of this program has benefited regional lake associations and municipalities. We have identified samples from numerous area lakes other than Lake George. Most often the specimens have not been exotic species, and therefore the concerns of lake residents have often been allayed. In the other instances, it has provided the impetus for concerted action on the part of the lake association.

As a part of this program, DFWI maintains an expanding list of sites we have verified to contain Eurasian Watermilfoil (Table 2, Figure 1), Waterchestnut (Table 3, Figure 2), Curly-leaf Pondweed (Table 4, Figure 3) and Fanwort (Table 5) in New York State. The list remains preliminary, since we currently lack verified sources for many lakes in which these species have been reported to occur. We will only add sites to the list for which an authoritative reference can be given, or for which we have a voucher specimen. We would appreciate receiving reports or other publications listing verified occurrences of these plants.

The Aquatic Plant Identification Program of Rensselaers Darrin Fresh Water Institute will continue to be offered as a public service during 1997. In order to have samples identified, bring or send them to the DFWI at either the Troy campus or Bolton Landing facility. For more information, see the notice provided as Appendix A of this report.

Table 1. Specimens Identified by the Rensselaer Fresh Water Institute Aquatic Plant Identification Program in 1996.

DFWI AQUATIC PLANT IDENTIFICATION PROGRAM - 1996

<u>SPECIES</u>	<u>Sample Number</u>	<u>DATE</u>	<u>LOCATION</u>
<i>Potamogeton foliosus</i>	96-01	07/09/96	Mannel-Bell Pond
<i>Myriophyllum farwellii</i>	96-02	07/11/96	Indian Lake
<i>Myriophyllum spicatum</i>	96-03	08/01/96	Upper Saranac Lake

APPENDIX A

AQUATIC PLANT IDENTIFICATION PROGRAM ANNOUNCEMENT

Darrin Fresh Water Institute (DFWI) has an ongoing program of identifying new sites with Eurasian watermilfoil both in Lake George, and in regional lakes. If you have a plant that you think may be Eurasian watermilfoil, we will gladly identify it for you free of charge.

To have plants identified, send or bring at least three intact plants to the DFWI laboratory facility in Bolton Landing on Lakeshore Drive (Route 9N) or to our RPI campus office (Materials Research Center 203). The plants should be in a plastic bag or container with water. In addition, we would like the following information: name of collector, lake name, site of collection, depth at which the plant was growing, date of collection, the name and phone number of a person to contact with the results.

Plants for identification should be directed to Lawrence Eichler. For more information, contact the DFWI site at ph.(518) 644-3541 or in Troy at (518) 276-8382 or 276-6757.
